

LAB III: SIMULATING INSTRUCTION WITH MEMORY IN PYTHON

**Siksha 'O' Anusandhan (Deemed to be University),
Bhubaneswar**

Branch:		Section:	
S. No.	Name	Registration No.	Signature

Marks: ____/10

Remarks:

Teacher's Signature

Objectives:

1. Write a Python program to initialize memory with values and display contents.
2. Write a menu-driven interactive Python program to create, read, and write memory.
3. Write a Python program for the Memory Simulator with Arithmetic Operations.
4. Write a Python program Stack Simulation Using Memory.
5. Write a Python program to simulate named memory variables using the concept of dictionary.
6. Write a Python program symbolic instruction execution using variable names.

Post Lab:

1. Write a Python program to sort memory cells and swap count .
2. Write a program to initialize memory with 10 locations and store the results of addition, subtraction, multiplication, and division of memory[0] and memory[1] in next location onwards.
3. Consider the following program. Write the output.

```
f = open('PYTHON', 'w')  
description =['we either choose the pain of discipline \n', 'or\n' 'the pain of  
regret\n'] f.writelines(description)  
f.close()  
f = open('PYTHON', 'r')  
print(f.read())  
f.close()
```
